

Lab 1 Canny Edge Detector

Coding Guidance

- If you do not want to use Anaconda as virtual env manager, you can use the command line to start your jupyter notebook by this command:

```
$jupyter notebook
```

- After you start your notebook in your browsers, you can write your code of [edge.py](#) in any python editor if you do not like Pycharm
- After you finish one of your functions in [edge.py](#), you can run the corresponding cell in the notebook by press SHIFT + ENTER.
